# 9   ICM_x Test Points

9.1   Communcation, unfiltered Wire Pair and filtered ADC Input signal

Best, use a differential probe. Or two single ended probes + GND connection in differential math-mode.

E.g., the half duplex comms. signal, measured at J2 at an mDOM-ICM, using a 1.5m 100ohm twisted pair cable and a diff. probe (Tektronix P6247).
